Subject RE: gw sampling schedule for next week (Omega)

Hi Tom - Will Grove will be in charge of the sampling effort for CDM. His cell number is 714/904-8813. We're starting sampling the afternoon of Feb. 22 as the sampling team will be in EMOU that morning. It usually takes 2.5 days to sample all the Omega wells, so we anticipate being done Thursday evening.

Sampling locations per day are generally dependent on parked cars, as most locations are on city streets. As you suggest, your field person should keep in close contact with Will Grove. Terra Pave requires that we sample OW1b after 7am and before 3pm, so we'll sample that well Wed. or Thurs. next week.

Regards, Sharon

Subject: gw sampling schedule for next week

Sharon,

can you please let us know the schedule of your groundwater monitoring next week? Our team will take splits from selected wells only, as before. It will be best if we can communicate directly with your field team.

Thanks,
Tom
